

Patent Application of Scott Edward Watson for “Integrated Magnetic Data Storage and Optical Disk Data Storage Device” continued – page 14

ABSTRACT:

An improved data storage device integrates a magnetic data storage means and optical data storage means onto a single chassis 326. A single printed circuit board 325 provides the electrical interconnections within the integrated magnetic and optical data storage device. A single interface connector 322 connects to a host system. A single power connector 323 connects to a host system.
